

Independent Fork Positioners

A fork positioner is a tool constructed out of top quality materials designed to be able to withstand the most demanding procedures and work environments. This piece of equipment enables the individual driving to maneuver the blades hydraulically without leaving the seat. Side shifting units have the extra ability to laterally position the entire load or the arms so as to facilitate much more exact lifting and placement in a faster and more efficient method.

The blade pocket is rather unique and enables the operator to safely swing the blades into position without any worry of destroying the positioning cylinders. This could allow the operator the option to be able to perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into fork positioners on existing units.
